WORK EXPERIENCE

Golis Telecom, Data Science Consultant

Jan/2025– Present

- Analyzed data from the network (2G, 3G, 4G and 5G).
- Collected, extracted, cleaned, and analyzed network KPI data from Huawei U2000 and OWS using Python and Power BI.
- Developed Power BI dashboards, KPI reports, and data visualizations to identify performance trends and network issue.

Toss Bank , Business Analyst

Jan /2024 – De/2024

- Applied Python, SQL, Excel, and Power BI to analyze large-scale operational and business datasets, transforming complex data into actionable insights to improve performance, reporting, and decision-making.
- Collected, cleaned, transformed, and analyzed large datasets using Python and SQL, integrating data from multiple sources to identify trends, performance patterns, and operational issues.
- Built structured data-processing workflows for recurring analysis and KPI reporting, improving data quality and reporting efficiency.
- Developed Power BI dashboards and Excel-based analytical reports to monitor KPIs, identify trends and anomalies, and provide actionable insights to business and technical stakeholders.

East Africa University, lecturer

Sep/2025 – Present

- Deliver lectures on Maxwell's equations, electromagnetic wave propagation, vector calculus, and boundary conditions to 5th-semester telecommunications students.
- Teach core theoretical modules covering transmission line theory, impedance matching, high-frequency signal behavior, and wave reflection/refraction.
- Explain fundamental antenna concepts, including radiation patterns, gain, directivity, and polarization, with applications to modern wireless communication systems.

Golis Telecom, Wireless Network Engineer

March/2018– Aug/2020

- Configured radio parameters, cell sites, frequency plans, and Physical Cell IDs (PCIs) across 2G, 3G, 4G, and 5G network layers.
- Conducted RF planning and coverage design, including site surveys, link budget calculations, and antenna tilt and azimuth planning to expand network coverage and capacity.
- Monitored and optimized RAN performance KPIs, including Call Drop Rate (CDR), Handover Success Rate (HOSR), accessibility, and user throughput, to improve network performance.
- Analyzed and post-processed drive test logs to identify signal degradation, interference, and coverage gaps, supporting troubleshooting and network optimization.

EDUCATION

Konkuk University, MSc in Data Science

2021-2024

Chonnam National University, Korean Intensive Course

2020-2021

Gollis University, BSc in Telecommunications

2014-2017

TECHNICAL SKILLS

- Programming & Data: Python, SQL, R, Pandas, NumPy
- Business Intelligence: Power BI, Tableau, Excel, DAX, Power Query
- Databases: PostgreSQL, SQL Databases, Data Modeling
- Data Engineering & Automation: ETL, Data Cleaning, Data Transformation, Data Pipelines, Workflow Automation
- Enterprise Systems: Jira, Microsoft 365, SharePoint.

PERSONAL PROJECTS

Financial Inclusion Analysis— End-to-End Data Pipeline | Python | [Financial Analysis](#)

- Analyzed financial inclusion in East Africa (Kenya, Rwanda, Tanzania, and Uganda) using a dataset of 23,000+ individuals to identify key socio-economic and demographic barriers to bank account ownership.
- Conducted EDA and visualization using Matplotlib and Seaborn to identify financial access patterns across demographic and geographic factor. You can
